

Environmental Information for
Basic Generation Service, PSE&G

(Electricity supplied from July, 1998 through June, 1999)

Electricity can be generated in a number of ways with different impacts on the environment. The standardized environmental information shown below allows you to compare this electricity product with electricity products offered by other electric suppliers.

Energy Source

PSE&G relied on these energy resources to provide this electricity product.

Coal	28.93%
Gas	14.23%
Hydroelectric (large)	0.18%
Nuclear	52.52%
Oil	0.94%
Renewable energy	
Captured methane gas	0.26%
Fuel cells	0%
Geothermal	0%
Hydroelectric (small)	0.02%
Solar	0%
Solid Waste	2.92%
Wind	0%
Wood or other biomass	0%

Renewable energy sources subtotal 3.2%

TOTAL 100%

Air Emissions

The amount of air pollution associated with the generation of the electricity product is shown. This amount is compared to a New Jersey benchmark. The benchmark approximates the average emission rate for all electricity generation in New Jersey.

CO₂ is a "greenhouse gas" which may contribute to global climate change. SO₂ and NO_x react to form acids found in acid rain. NO_x also reacts to form ground level ozone, an unhealthful component of "smog."

Energy Conservation

Electricity generation and associated air emissions avoided through PSE&G's investments in conservation measures. Energy conservation measures mean less electricity needs to be generated and pollution is avoided.

Avoided Generation	Avoided Air Emissions
0 KWh	0 tons CO ₂
	0 tons NO _x
	0 tons SO ₂

See your **Terms of Service** for further information regarding this electricity product. You may also call PSE&G for additional information, or a copy of the Terms of Service at (800) 706-PSEG.
